

B	I	N	G	O
When an object falls potential energy transforms into what?	A roller coaster at the top of a hill has what type of energy that later turns into kinetic energy?	Energy from moving electrons	Stored energy ready to be used	Energy used when something moves
Energy from heat	When a spring is stretched farther what happens to the elastic potential energy stored in it?	In a toaster electrical energy changes into what type of energy	During photosynthesis radiant energy from the sun changes into what form of energy?	Solar panels change radiant (light) energy into what form?
When a speaker plays music electrical energy changes into what?	When you eat food and then run chemical energy transforms into what?	FREE	Energy changing from one form to another	Energy of motion
Energy stored due to position	When a light bulb is on electrical energy changes into what two forms of energy?	Energy stored in food or fuel	Energy in moving parts of a machine	In a car engine chemical energy from gasoline transforms into what energy that moves the car?
Energy from vibrations	Energy from atomic reactions	In a wind turbine kinetic energy from wind changes into what?	When you rub your hands together kinetic energy turns into what?	Energy from light waves
